NetLessor Minor Release

2025.1.2.0 - April 30th, 2025

Minor Updates

- Updated initial balance entry calculations to include Initial Direct Costs when Leased Asset Fair Value does not match Leased Asset Carrying Cost.
- Added new quick access button to global settings, Rewind Lease, which allows users to run the time machine restricted to a single lease from a controlled script deployment with separate permissions from the normal time machine used for bulk rewinding leases.
- Added logic to convert non-lease payment modifications to complete modifications if a core payment is updated.
- Added controls to warn users from updating payments on posted leases outside of the modification process.
- Updated equivalent monthly payment logic to not start until the commencement date except in the case of a lease pre-payment entered on the header of the lease.
- Added support for mid-month terminations on leases with a lease term unit of Months To Date From Initial Payment Date.
- Added support for negative amounts on lease reduction contract provisions.

Bug Fixes

- Fixed issue that the back billing checkbox could be triggered when the back billing feature was disabled causing issues when creating amortizations without the proper setup to support back billing.
- Fixed issue when modifiying a Lease with payment frequency that was greater than monthly that the Equivalent Monthly Payment could duplicate of the modification was taking place within the same month of a payment that would require a mid-month amortization.
- Fixed issue when renewing a lease that the modification were updating all the subsequent renewals as well when it was not needed.
- Fixed issue when generating a schedule with a pre-payment that did not have a next payment date or a inital payment an error would occur.
