

NetAsset Minor Release

2025.1.8.0 - August 26th, 2025

Minor Updates

- Added a pop-up selection on the NetAsset Tax Year to allow the user to select a specific tax payer to generate reports for.
- Added functionality to update segmentation fields on the asset schedule lines when the segment is changed on the asset header outside of the normal transfer process.
- Added support for in-app messaging in order to better communicate release notes and any critical app issues.
- Improved the handling of True-Up between asset types. Now when a True-Up is created we will set the asset types on the journals to better reflect the true-ups for reporting purposes.

Bug Fixes

- Fixed an issue when processing journals that more assets were found in the criteria than the number of journals to process causing a slow-down in the processing.
- Fixed issue when creating a new custom filter on an erroneously error would pop-up if the report type filter was selected.
- Fixed an issue filtering for schedule lines using Override Go-Live Dates resulting in the go-live journal processing job returning no results.
- Fixed an issue when using the Time Machine option "Delete Child Assets", if the Parent Asset was in a status of split, but there were no child assets, the search would unexpectedly return all assets rather than none
- Improved the handling of Fully Depreciated Assets on Multi-Book Assets when the primary book is Fully Depreciated but other books are not.
- Fixed an issue duplicating schedule lines on a full time machine rewind of an asset with transactions posted in closed periods
- Improved handling the getting the description fields of when running a NetAsset Automation Rule.
- Fixed an issue when running reports that were over the threshold of script execution time would be bypassed if a majority of the assets in the account were no longer in-service.
- Improved the handling of custom sourcing joins for List/Records fields on the project create assets page.
- Fixed an issue when trying to perform a catch-up reversal on an asset that added a Subsidiary after the create of the asset.

- Improved the handling of the Mark All button, now when the underlying search running slower than expected the check will happen up to 10 times avoiding an incorrect message that no assets were found.
- Fixed an issue when trying to perform a catch-up reversal on an asset that added a Subsidiary after the create of the asset.
- Fixed an issue when running the Tax Register, when viewing a report that had a monthly tax schedule the report could fail to show the section 179 & 168 amounts.
- Fixed an issue when performing a Full Rewind on an asset that has been disposed the quantity of the asset would not be updated.
- Added missing header memo on Direct Expense Entries created directly from the Create Assets pages.
