NetAsset Minor Release

2025.0.2.0 - February 19th, 2025

Minor Updates

- Added better support for unicode characters for CSV exports.
- Added support for true ups on assets with summarized depreciation.
- New "Tax Register" report now added upon bundle install/upgrade.

Bug Fixes

- Fixed an issue causing multiple currencies to appear on generated schedule lines of multi-book assets with different currencies for each book.
- Fixed issue with disposal invoicing customer subsidiary validation not accounting for multi-subsidiary customers.
- Fixed issue when splitting a fully depreciated asset would not populate the child lines.
- Improved protection against the creation of duplicate splits.
- Fixed issue batching table based schedule generation based on the wrong useful life.
- Updated intercompany transfers to ignore sourcing setup for the entity field so proper intercompany entities are used.
