

NetLessor Minor Release

2025.1.4.0 - June 6th, 2025

Minor Updates

- Added a new field to the Lease record, Trigger Lease Classification, that allows the user to trigger the classification determination process on a pending lease.
- Made performance improvements to the lease transfer process.
- Added 2 new custom reclass account mappings to the lease type record (now totaling 4).

Bug Fixes

- Improved handling of the "Renew" button on the Lease Modification Suitelet. This button will no redirect you to the Modification Suitelet if the lease does not have any renewals available.
- Fixed an issue with the plug to route income through interest when the NIL balance goes to 0 before the end of the lease.
- Fixed issue where the old commencement date was not being populated on the Modification Proposal when the Modification Type was set to True Up on CSV Import or UI creation.
- Fixed issue where the initial payment date was required when the Initial Payment global setting was not enabled.
- Fixed an issue when Terminating in the final period of a lease it could set the effective termination period to same period number as the final period.
- Fixed an issue when using the Always Calculate As Operating setting on the Lease Classification Accounting field, the classification determination would re-calculate the rates on import of a modification.
- Fixed an issue when NetSuite would restart a Map/Reduce task in the Invoice MR it could potentially create duplicate journal entries. We will now check to see if the function has restarted and try to recover or address the duplicated journals.
