

NetLease Minor Release

2026.1.3.0 - May 14th, 2026

Minor Updates

- Added the ability to create query-based reports.
- Added a warning on the Setup page when changing the system Go-Live Date if go-live entries have already been posted. Users are advised to use the Override Go-Live Date on the lease instead and leave the system Go-Live Date set to the earliest known go-live.

Bug Fixes

- Fixed issue when using the uplift feature in the Lease Modification suitelet that if a Lease had an initial payment, that wasn't a separate payment record, the user would get an alert that the payment wouldn't be added.
- Updated termination processing to always use the go-live date on the lease record for more consistent processing.
- Fixed issue with missing field on search for automated lease creation.
