

## NetLessor Minor Release

**2025.0.1.0 - January 29th, 2026**

### Minor Updates

- Added the ability to set the transaction form per Subsidiary for Invoices and Credit Memos.
- Added the ability to create payments from the Create Lease From Transaction page when using initial payment amounts.
- Allow lease classification, lease schedule, and uplifts to apply when creating a lease from create lease from transaction page.
- Changed the credit memo date to match the current period start date for prior period terminations.
- Update functionality from the out of the box Sales Order Automation Rule to enable grouping.

### Bug Fixes

- Fixed an issue that would throw an error if there was a contract provision that was related to the modification that was deleted during the reversal process.
- Fixed an issue when reversing a mid-period termination that would not update the contract provisions correctly.
- Fixed an issue when reversing a mid-period termination could attempt to reverse an incorrect transaction type.
- Fixed an issue when viewing a Lease that had its status set to Terminated but the termination proposal was not created, the reverse termination button would be displayed.
- Fixed an issue when running modifications with the Always Post as Operating classification that would not correctly post the gain loss entry and incorrectly post the classification change lines.
- Fixed an issue when running a true-up modification with a version that would swap the lease classification to cash basis.
- Fixed an issue when using the Automation Suitelet to create leases that would not correctly group the leases by the specified groupings.
- Fixed an issue with how sourced columns were added to the grid on the Create Lease From Transaction page.
- Fixed an issue when generating the schedule for cash basis leases.
- Fixed an issue where the lease end date would not correctly set during modifications.
- Fixed an issue that null values were not being filtered out on Custom Reclass Journals screens.
