

NetLessor Minor Release

2024.1.6.0 - July 16th, 2025

Minor Updates

- Added an import tool (linked in NetLessor Setup) that allows for all NetLessor related Suitelets to be updated with the desired roles with a single submit.
- Added new global setting, Allow Incremental Transactions on Modifications, that allows modifications to create incremental transactions (i.e. create a new transaction for each period within the modification a payment change occurred).
- Added a hidden entity field to the lease record that automatically stores the customer as an entity so that entity fields for the customer can be sourced in from the hidden field.
- Added new global setting, Prorate Payment by EMP on Future Terminations, that allows users to indicate whether the final payment should be prorated using equivalent monthly payments during future terminations.

Bug Fixes

- Fixed an issue preventing users from loading a new modification proposal.
- Fixed an issue when trying to do a mid-month modification with a non-monthly payment frequency that Leases created before February 2025 were not able to process.
- Fixed an issue when performing a mid-month modification would incorrectly update the schedule line for the prior period where the payment was made.
- Fixed an issue when running journals with a Lease Fee applied to it without an account the Amortization Journal would not be created. This will now default to the lease receivable clearing account.
- Fixed an issue on prior period terminations when the termination was done mid-month the sum of all rounding due to prorating would leave a unbalanced journal preventing the journal from being created.
- Fixed an issue with the select checkbox not appearing on the "NetLessor | Create Lease" from transaction page.
